

Insights & Recommendations

Mobile Sales Dashboard

Executive Summary

The dashboard provides an overview of mobile phone sales across different cities, brands, payment methods, customer ratings, and monthly sales trends. It helps stakeholders identify high-performing brands, customer buying behavior, seasonal demand, and opportunities to improve sales and customer satisfaction.

Key Business Insights & Recommendations

1. KPI Cards

Insight

Total Sales reached **769 Million**.

Around **19K units** were sold through **4K transactions**.

The average selling price is approximately **40K**, indicating that customers are purchasing mid to premium-range smartphones.

Recommendation

Continue promoting premium smartphones while introducing financing or EMI options to attract more customers.

2. Sales by City (Map)

Insight

Sales are concentrated in a few major cities, while several cities contribute relatively lower sales.

Business Impact

This indicates unequal market penetration across regions.

Recommendation

Increase marketing campaigns in low-performing cities.

Strengthen dealer networks and promotional activities where sales are comparatively low.

Analyze the reasons behind the strong performance of top cities and replicate those strategies elsewhere.

3. Customer Ratings

Insight

Most customers have given **5-star ratings**, followed by 4-star ratings. Very few customers rated the products 1 or 2 stars.

Business Impact

Overall customer satisfaction is high, which improves customer loyalty and brand reputation.

Recommendation

Continue maintaining product quality and customer service.

Analyze low-rated transactions to identify recurring customer issues and reduce negative experiences.

4. Payment Method Distribution

Insight

Transactions are almost equally distributed among **UPI, Debit Card, Credit Card, and Cash.**

Business Impact

Customers are comfortable using multiple payment methods.

Recommendation

Continue supporting all payment options.

Partner with banks and UPI providers to offer cashback and discount campaigns that can increase sales.

5. Monthly Sales & Quantity Trend

Insight

Sales fluctuate throughout the year, with noticeable peaks around **March, July, and October**, while **February and September** show relatively weaker performance.

Business Impact

Sales appear to be seasonal.

Recommendation

Launch promotional campaigns before expected low-sales months.

Increase inventory before high-demand periods to avoid stock shortages.

Plan marketing budgets according to seasonal demand.

6. Brand Performance

Insight

Apple generated the highest total sales, while Samsung sold a similar quantity but produced slightly lower revenue.

Business Impact

Apple products generate higher revenue per unit sold.

Recommendation

Focus premium marketing efforts on Apple.

Improve Samsung revenue through premium model promotions and bundled offers.

7. Best Selling Models

Insight

The top-selling models are:

iPhone SE

OnePlus Nord

Galaxy Note 20

These products contribute significantly to total sales.

Recommendation

Ensure sufficient inventory for these models.

Prioritize these devices during festive promotions.

Cross-sell accessories such as cases, chargers, and earbuds to increase average order value.

8. Quantity Bought by Customer Age

Insight

Customers from different age groups purchase smartphones, with no single age group dominating purchases.

Business Impact

The customer base is diverse.

Recommendation

Design age-specific marketing campaigns.

Promote gaming and performance phones to younger customers.

Promote premium and productivity-focused phones to working professionals.

Conclusions

The dashboard shows that the business is performing well, with strong overall sales, high customer satisfaction, and balanced payment preferences. However, there are opportunities to improve regional sales, capitalize on seasonal demand, and optimize product promotions. By focusing on these areas, the company can increase revenue, strengthen customer engagement, and achieve sustainable growth.
